Featured index

September brought [more changes to the methodology](#) behind the blue-chip [DAX®](#). For the first time since the index was introduced in 1988, the number of components' shares, weight factors and caps affected by the quarterly review was fixed using data as of the close on t-6 (six trading days before the effective rebalance date on the third Friday of the review month), instead of t-0 previously. The changes were published in the 'business forecast' file on t-5, instead of t-2, giving traders the certainty of confirmed, fixed data.

The advanced fixing of review adjustments and their earlier publication enables index trackers to integrate their DAX-related dealing into their overall trading activity, benefitting, among others, from larger liquidity and efficient inventory management. The DAX review calendar is, since last month, also aligned with that of STOXX European indices, improving the possibilities for investors replicating indices to match their buy and sell requirements within their own inventories.

The latest update to the DAX methodology resulted from a [market consultation](#) conducted earlier this year, and follows a [broader overhaul of DAX Selection indices](#) that started in 2020 and that was aimed at bolstering the quality of member companies, bringing selection criteria in line with international standards and improving representativeness. The modifications have included the enlargement of the DAX benchmark to 40 stocks from 30 previously, and a new requirement for DAX-eligible companies to be profitable.

Benchmark indices

Key points

In September, stocks suffered the worst monthly selloff since March 2020, with the [STOXX® Global 1800 index](#) erasing all of its gains from the northern hemisphere’s summer, as central banks around the world pushed ahead with more interest-rate hikes.

The global benchmark lost 9.3% last month when measured in dollars and including dividends, ending at its lowest level since November 2020. The benchmark fell 6.9% in euros after the greenback rose 2.6% against the common currency. The STOXX Global 1800 posted a loss of 6.1% in dollars in the third quarter, its third consecutive quarterly loss, and is poised for its worst year since the Global Financial Crisis in 2008.

The [STOXX® North America 600](#) fell 9.2% in dollars in September, as did the [STOXX® USA 500](#). The pan-European [STOXX® Europe 600](#) dropped 6.5% in euros and the Eurozone’s [EURO STOXX 50®](#) decreased 5.5%. The [STOXX® Asia/Pacific 600](#) declined 10.5% in dollars.

DAX indices

Key points

Germany's DAX family is led by DAX, the blue-chip benchmark. MDAX® and SDAX®, respectively, gauge the performance of the country's mid- and small-caps. TecDAX® tracks German technology companies. HDAX® groups all equities that belong to either DAX, MDAX or TecDAX.

All indices had negative returns in September.

ESG Broad Market indices

Key points

The STOXX ESG Broad Market indices apply a set of compliance, product involvement and ESG performance exclusionary screens on a starting benchmark universe until only the 80% top ESG-rated constituents remain. Companies that are non-compliant based on the Sustainalytics Global Standards Screening assessment or are involved in controversial weapons are not eligible for selection. Additional filters exclude companies involved in tobacco production, thermal coal and military contracting.

ESG Target indices

Key points

The [STOXX® ESG Target indices](#) seek to significantly improve the benchmark portfolio's ESG profile, while mirroring its returns as closely as possible.

The indices follow a similar initial selection methodology as the STOXX ESG Broad Market Indices. From that selection pool they implement, through a series of constraints, an optimization process to maximize the overall ESG score of the portfolio while constraining the tracking error to the benchmark.

ESG-X indices

Key points

The [STOXX ESG-X indices](#) are versions of traditional, market-capitalization-weighted benchmarks that observe [standard responsible exclusions](#) of leading asset owners. They incorporate basic norm- and product-based exclusion criteria to comply with ESG principles. Companies are excluded based on data provider Sustainalytics' determination of non-compliance with their Global Standards Screening assessment, involvement in controversial weapons, tobacco production, thermal coal extraction or exploration, or use of thermal coal to generate at least a quarter of power output.

ESG and Sustainability indices

Key points

Among the STOXX ESG and Sustainability indices, the [EURO STOXX 50® ESG index](#) outperformed its benchmark by 47 basis points in September.

The [STOXX® Global ESG Select KPIs index](#) performed in line with the STOXX Global 1800. The STOXX ESG Select KPIs Indices offer a broad market exposure that is tilted towards companies that score better with respect to a small set of environmental, social, and governance key performance indicators.

Climate Indices – Paris-Aligned Benchmark indices

Key points

The [STOXX Paris-Aligned Benchmark indices \(PABs\)](#) are based on liquid securities from a selection of STOXX Benchmark Indices and follow the [EU Paris-aligned Benchmark \(EU PAB\) requirements](#) outlined by the European Commission’s Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks.

Those requirements are designed such that the resulting PAB portfolio’s greenhouse gas (GHG) emissions are aligned with the long-term global warming target of the Paris Climate Agreement. The indices incorporate stringent carbon limitations in the selection of holdings, in line with global commitments to work towards keeping global warming between 1.5°C and 2°C above pre-industrial levels.

We have partnered with Sustainalytics for datasets relating to their Global Standards Screening and controversial weapons, and with ISS ESG for climate-related data such as Scope 1 to Scope 3 emissions, science-based climate targets, and others.

Climate indices – Climate Transition Benchmark indices

Key points

The [STOXX Climate Transition Benchmark indices \(CTBs\)](#) are based on liquid securities from a selection of STOXX Benchmark Indices and follow the [EU Climate Transition Benchmark \(EU CTB\) requirements](#) outlined by the European Commission’s Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks.

Those requirements are designed such that the resulting CTB portfolio is on a decarbonization trajectory.

As with the Paris-Aligned Benchmarks, we have partnered with Sustainalytics for exclusions datasets, and with ISS ESG for climate-related data, science-based climate targets and others.

Climate Indices – Impact, Change Leaders and Awareness indices

Key points

Among other STOXX Climate Indices, the [STOXX® Global Climate Change Leaders index](#) underperformed the STOXX Global 1800 index by 84 basis points last month. The Climate Change Leaders index selects corporate pioneers that are publicly committed to reducing their carbon footprint.

The [STOXX® Global Climate Impact Ex Global Compact Controversial Weapons & Tobacco index](#), meanwhile, performed in line with the STOXX Global 1800 Index. The STOXX Climate Impact Ex Global Compact Controversial Weapons & Tobacco Indices include companies that are leading in terms of climate change as well as those that are managing the effect of climate-related issues. They additionally exclude companies in contravention of global norms, and those involved with coal, tobacco or controversial weapons.

We have partnered with CDP, a leading climate data provider, to track companies taking action on, managing and understanding the effects of climate change.

Climate Indices - Willis Towers Watson Climate Transition Indices

Key points

The STOXX Willis Towers Watson Climate Transition Indices (CTI) employ a unique Climate Transition Value at Risk (CTVaR) methodology that quantifies the anticipated impact of an economic transition on equity valuations. The CTIs enable a more sophisticated way of managing climate transition risk, one that looks beyond carbon emissions and makes a forward-looking, bottom-up evaluation of asset repricing risks in a decarbonization pathway.

By using the CTVaR projections, the indices tilt towards companies that are expected to fare well and away from companies that are expected to experience meaningful losses in value as the economy moves to a global-temperature scenario of 'well below' 2°C.

Industry Neutral Factor indices

Key points

The STOXX Industry Neutral Single and Multi-Factor indices aim to harvest the risk premia of several academically validated style factors — Value, Momentum, Quality, Size and Low Risk — within each ICB industry.

The indices rely on Axioma’s proven factor models and keep the same industry allocation as the respective benchmarks, helping remove unintended industry exposures and enabling access to the ‘pure’ return of the factor. Size was the worst signal in September for the Industry Neutral Factor indices covering Europe, while Value was the laggard in the STOXX USA 500 universe.

Minimum Variance indices

Key points

There were strong relative performances from [Minimum variance strategies](#) covering the US last month. The STOXX Minimum Variance indices come in two versions. A constrained version has similar exposure to its market-capitalization-weighted benchmark but with lower risk. The unconstrained version, on the other hand, has more freedom to fulfill its [minimum variance mandate](#) within the same universe of stocks.

Dividend indices

Key points

[Dividend strategies](#) also struggled last month.

The [STOXX® Global Maximum Dividend 40 index](#) selects only the highest-dividend-yielding stocks. The [STOXX® Global Select Dividend 100 index](#), meanwhile, tracks companies with sizeable dividends but also applies a quality filter such as a history of stable payments. The [STOXX® Global ESG-X Select Dividend 100 index](#) targets the highest-yielding stocks within universes screened for responsible investment criteria.

The [STOXX® Global Select 100 EUR index](#) blends increasing dividend yields with low volatility and is calculated in euros.

Volatility indices

Key points

European equity volatility climbed slightly in September, as measured by the [EURO STOXX 50® Volatility \(VSTOXX®\) index](#) and [VDAX-New® index](#). The [EURO STOXX 50® Volatility of Volatility index \(V-VSTOXX\)](#) also increased.

The VSTOXX and VDAX measure the implied volatility of EURO STOXX 50 index and DAX index options, respectively, across their entire expiration curve. The V-VSTOXX measures the implied volatility of options on VSTOXX futures, hence reflecting expectations regarding the volatility of volatility. All three are significantly lower than their March 2020 peaks. The VSTOXX, for example, rose to 86 in March 2020.

There was a high negative correlation between the VSTOXX and VDAX and share prices last month.

Volatility Strategy indices

Key points

The [VSTOXX® Short-Term Futures](#) and [VSTOXX® Mid-Term Futures](#) indices, which track the return from a rolling long position in VSTOXX futures contracts on Eurex, had positive returns in the month that ended. The [EURO STOXX 50® Investable Volatility index](#), which measures forward implied volatility in the Eurozone equity market, also rose.

The [Dynamic VSTOXX® index](#) added 0.6% in the month. The index combines the VSTOXX Short-Term Futures index and the VSTOXX Mid-Term Futures index to exploit the superior performance of short-term futures when the volatility forward curve is in backwardation and of mid-term futures when the volatility forward curve is in contango.

Lastly, the [EURO STOXX 50® Volatility-Balanced index](#) fell 3.9%. The index combines investments in the EURO STOXX 50 and in the VSTOXX Short-Term Futures index.
