Featured indices

Last month, Qontigo introduced a new family of indices that allows investors to take a comprehensive approach to biodiversity challenges.

The [new ISS STOXX® indices](#) exclude companies involved in activities causing harm to biodiversity, select securities that have positive impact on ecosystems and those enabling exposure to relevant UN Sustainable Development Goals (SDGs), and, finally reduce the portfolio's carbon emissions. Their overall objective is to allocate capital to companies that minimize their biodiversity footprint and help our world's natural capital.

The ISS STOXX Biodiversity indices address three different biodiversity goals (Figure 1):

- “avoid”
- “minimize”
- “enable”

Additionally, they incorporate a climate objective: “decarbonize.”

The indices are classified into two categories: “Biodiversity” and “Biodiversity Leaders.” The former tilt exposure to companies with high scores in seven biodiversity- and climate-related SDG objectives, while the latter include companies with high revenues from products and services that restore climate or biodiversity.

Indices in the first category comply with current Article 8 requirements of the Sustainable Finance Disclosure Regulation (SFDR) and include the [ISS STOXX® Developed World Biodiversity](#). Those in the Leaders cluster are, as per present regulation, aligned with SFDR's more ambitious Art. 9. They include the [ISS STOXX® World AC Biodiversity Leaders](#).

Figure 1: ISS STOXX Biodiversity indices framework

Goal	ISS STOXX Biodiversity Indices	ISS STOXX Biodiversity Leaders Indices
Avoid	Exclude companies involved in activities causing harm to biodiversity	
Minimize	Exposure to companies with low negative impact on biodiversity: Reduce Potentially Disappeared Fraction of Species (PDF) / Enterprise Value Including Cash (EVIC)	
Enable	Increase exposure to companies whose solutions give them high scores in biodiversity- and climate-related UN SDGs	Increase exposure to companies with a high percentage of revenues derived from activities aligned with biodiversity- and climate-related UN SDGs
Decarbonize	Reduce carbon intensity by at least 30% relative to the parent index	
SFDR Suitability	Article 8	Article 9

Benchmark indices

Key points

Global equity indices retreated in May, dragged lower by European and Asian shares. In the US, better-than-expected earnings from technology companies overshadowed concerns about a government default and ongoing interest rate hikes.

The [STOXX® Global 1800 index](#) lost 1.1% last month in dollars and including dividends. The index added 2.4% in euros after the greenback rose 3.4% against the common currency.

The Eurozone's [EURO STOXX 50®](#) fell 1.9% in euros and the pan-European [STOXX® Europe 600](#) shed 2.3%. The [STOXX® North America 600](#) climbed 0.2% in dollars, while the [STOXX® USA 500](#) added 0.6%. The [STOXX® Asia/Pacific 600](#) fell 1.1% in dollars.

World Equity indices

Key points

The [STOXX® World Equity](#) indices are a modular suite that allows investors to flexibly build portfolios covering a broad and liquid universe of markets.

Introduced in 2022, the STOXX World Equity indices comprise Qontigo's largest pool of markets and stocks to date. With turnover and market-capitalization filters in the stock selection to ensure they are tradable and representative, the indices track the performance of large-, mid- and small-cap stocks from a full range of developed and emerging markets, as well as derived sector strategies.

There are two defining features of the STOXX World Equity indices: their exhaustive scope and their modularity. The suite can be used as the basis to create highly targeted solutions in the three focus areas of sustainability, factors and thematics.

DAX indices

Key points

Germany's DAX family is led by [DAX®](#), the blue-chip benchmark. [MDAX®](#) and [SDAX®](#), respectively, gauge the performance of the country's mid- and small-caps. [TecDAX®](#) tracks German technology companies. [HDAX®](#) groups all equities that belong to either DAX, MDAX or TecDAX.

The five indices registered losses last month.

DAX ESG indices

Key points

Qontigo offers four sustainable options as indices for German equities: [DAX® 50 ESG](#), [DAX® ESG Target](#), [DAX® ESG Screened](#) and [MDAX® ESG Screened](#). All four also had negative returns in the month that ended.

ESG Broad Market indices

Key points

The [STOXX® ESG Broad Market](#) indices apply a set of compliance, product involvement and ESG performance exclusionary screens on a starting benchmark universe until only the 80% top ESG-rated constituents remain. Companies that are non-compliant based on Sustainalytics' Global Standards Screening assessment or are involved in controversial weapons are not eligible for selection. Additional filters exclude companies involved in tobacco production, thermal coal, unconventional oil and gas, small arms, military contracting and ESG controversies.

ESG Target indices

Key points

The [STOXX® ESG Target indices](#) seek to significantly improve the benchmark portfolio's ESG profile, while mirroring its returns as closely as possible.

The indices follow a similar initial selection methodology as the STOXX ESG Broad Market Indices. From that selection pool they implement, through a series of constraints, an optimization process to maximize the overall ESG score of the portfolio while constraining the tracking error to the benchmark.

ESG Target TE indices

Key points

The [STOXX® ESG Target TE indices](#) follow a similar methodology to the ESG Target indices, but the optimization imposes a tracking error minimization, subject to a constraint of improving the ESG score of the resulting portfolio.

ESG-X indices

Key points

The [STOXX ESG-X indices](#) are versions of traditional, market-capitalization-weighted benchmarks that observe [standard responsible exclusions](#). They incorporate basic norm- and product-based exclusion criteria to comply with ESG principles. Companies are excluded based on Sustainalytics' determination of non-compliance with their Global Standards Screening assessment or if they have a 'severe' ESG risk rating from the data provider. Companies involved in controversial weapons, small arms, military contracting, unconventional oil and gas, tobacco and thermal coal (extraction or use for power generation) are also removed.

ESG and Sustainability indices

Key points

Among the STOXX ESG and Sustainability indices, the [EURO STOXX 50® ESG](#) index outperformed its benchmark by 79 basis points during the month.

The [STOXX® Global ESG Select KPIs index](#), on the other hand, underperformed the STOXX Global 1800 by 20 basis points. The STOXX ESG Select KPIs Indices offer a broad market exposure that is tilted towards companies that score better with respect to a small set of environmental, social, and governance key performance indicators.

Climate Indices – Paris-Aligned Benchmark indices

Key points

The [STOXX Paris-Aligned Benchmark indices \(PABs\)](#) are based on liquid securities from a selection of STOXX Benchmark indices and follow the [EU Paris-aligned Benchmark \(EU PAB\) requirements](#) outlined by the European Commission’s Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks.

Those requirements are designed such that the resulting PAB portfolio’s greenhouse gas (GHG) emissions are aligned with the long-term global warming target of the Paris Climate Agreement. The indices incorporate stringent carbon limitations in the selection of holdings, in line with global commitments to work towards keeping global warming between 1.5°C and 2°C above pre-industrial levels.

We have partnered with Sustainalytics for datasets relating to their Global Standards Screening and controversial weapons, and with ISS ESG for climate-related data such as Scope 1 to Scope 3 emissions, science-based climate targets, and others.

The [STOXX® Global 1800 PAB](#) outperformed its benchmark by 109 basis points in May.

Climate indices – Climate Transition Benchmark indices

Key points

The [STOXX Climate Transition Benchmark indices \(CTBs\)](#) are based on liquid securities from a selection of STOXX Benchmark Indices and follow the [EU Climate Transition Benchmark \(EU CTB\) requirements](#) outlined by the European Commission’s Regulation (EU) 2020/1818, supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council on climate benchmarks.

Those requirements are designed such that the resulting CTB portfolio is on a decarbonization trajectory.

As with the Paris-Aligned Benchmarks, we have partnered with Sustainalytics for exclusions datasets, and with ISS ESG for climate-related data, science-based climate targets and others.

The [STOXX® Global 1800 CTB](#) beat its benchmark by 93 basis points in May.

Climate Indices – Impact, Change Leaders and Awareness indices

Key points

Among other STOXX Climate Indices, the [STOXX® Global Climate Change Leaders index](#) trailed the STOXX Global 1800 index by 14 basis points last month. The Climate Change Leaders index selects corporate pioneers that are publicly committed to reducing their carbon footprint.

The [STOXX® Global Climate Impact Ex Global Compact Controversial Weapons & Tobacco index](#), meanwhile, outperformed the STOXX Global 1800 Index by 45 basis points. The STOXX Climate Impact Ex Global Compact Controversial Weapons & Tobacco Indices include companies that are leading in terms of climate change as well as those that are managing the effect of climate-related issues. They additionally exclude companies in contravention of global norms, and those involved with coal, tobacco or controversial weapons.

We have partnered with CDP, a leading climate data provider, to track companies taking action on, managing and understanding the effects of climate change.

Climate Indices - Willis Towers Watson Climate Transition Indices

Key points

The [STOXX Willis Towers Watson Climate Transition Indices \(CTI\)](#) employ a unique Climate Transition Value at Risk (CTVaR) methodology that quantifies the anticipated impact of an economic transition on equity valuations. The CTIs enable a more sophisticated way of managing climate transition risk, one that looks beyond carbon emissions and makes a forward-looking, bottom-up evaluation of asset repricing risks in a decarbonization pathway.

By using the CTVaR projections, the indices tilt towards companies that are expected to fare well and away from companies that are expected to experience meaningful losses in value as the economy moves to a global-temperature scenario of “well below” 2°C.

Industry Neutral Factor indices

Key points

The STOXX Industry Neutral Single and Multi-Factor indices aim to harvest the risk premia of several academically validated style factors — Value, Momentum, Quality, Size and Low Risk — within each ICB industry.

The indices rely on Axioma’s proven factor models and keep the same industry allocation as the respective benchmarks, helping remove unintended industry exposures and enabling access to the ‘pure’ return of the factor. Low Risk was the worst signal last month for the Industry Neutral Factor indices covering Europe, while Size trailed in the US.

Minimum Variance indices

Key points

Minimum variance strategies had poor performances last month, as investors avoided low-risk shares.

The STOXX Minimum Variance indices come in two versions. A constrained version has similar exposure to its market-capitalization-weighted benchmark but with lower risk. The unconstrained version, on the other hand, has more freedom to fulfill its [minimum variance mandate](#) within the same universe of stocks.

Dividend indices

Key points

[Dividend strategies](#) also struggled last month.

The [STOXX® Global Maximum Dividend 40 index](#) selects only the highest-dividend-yielding stocks. The [STOXX® Global Select Dividend 100 index](#), meanwhile, tracks companies with sizeable dividends but also applies a quality filter such as a history of stable payments. The [STOXX® Global ESG-X Select Dividend 100 index](#) targets the highest-yielding stocks within universes screened for responsible investment criteria.

The [STOXX® Global Select 100 EUR index](#) blends increasing dividend yields with low volatility and is calculated in euros.

Volatility indices

Key points

European equity volatility increased in May, as measured by the [EURO STOXX 50® Volatility \(VSTOXX®\) index](#) and [VDAX-New® index](#). The [EURO STOXX 50® Volatility of Volatility index \(V-VSTOXX\)](#) also rose.

The VSTOXX and VDAX measure the implied volatility of EURO STOXX 50 index and DAX index options, respectively, across their entire expiration curve. The V-VSTOXX measures the implied volatility of options on VSTOXX futures, hence reflecting expectations regarding the volatility of volatility. All three are significantly lower than their March 2020 peaks. The VSTOXX, for example, rose to 86 in March 2020.

The VSTOXX and VDAX had a high negative correlation to share prices in the month that ended.

Risk and return characteristics

	Index Level			Correlation	
	T	T-1M	T-12M	1M	1Y
1. VSTOXX	20.0	17.4	25.2	-0.9	-0.8

Volatility Strategy indices

Key points

The [VSTOXX® Short-Term Futures](#) and [VSTOXX® Mid-Term Futures](#) indices, which track the return from a rolling long position in VSTOXX futures contracts on Eurex, fell in May. The [EURO STOXX 50® Investable Volatility index](#), which measures forward implied volatility in the Eurozone equity market, also dropped.

The [Dynamic VSTOXX® index](#) slid 0.8% in the month. The index combines the VSTOXX Short-Term Futures index and the VSTOXX Mid-Term Futures index to exploit the superior performance of short-term futures when the volatility forward curve is in backwardation and of mid-term futures when the volatility forward curve is in contango.

Lastly, the [EURO STOXX 50® Volatility-Balanced index](#) fell 2.3%. The index combines investments in the EURO STOXX 50 and in the VSTOXX Short-Term Futures index.
